Multi-FPGA system for high performance computing & network processing

High performance computing (HPC) and network/packet processing applications demand high-power processing and low-latency I/O. BittWare’s Serial Expansion Chassis delivers both, with up to 4.6 Terabits/sec of I/O and the processing power of up to 8 large FPGAs. A scalable, high-performance FPGA platform, it is a turnkey solution that arrives tested and configured, ready for you to begin developing your application. Connect multiple TeraBox X5000TT expansion chassis to a server, such as BittWare’s TeraBox 4000S, and you can have dozens of FPGAs connected to the same host.
FPGA Cards
The TeraBox X5000TT supports up to eight BittWare PCIe cards. Choose from variety of cards based on the Speedster 7t, Stratix 10, or UltraScale+ FPGAs. System specs will vary greatly, depending on the FPGA card you select. For example with eight BittWare XUP-P3R PCIe cards, which support up to 512 Gbytes of DDR4 per card, the chassis can support as much as 4 Terabytes of memory with 4.9 Terabits/sec of memory bandwidth. With four Stratix 10 cards, each chassis supports 16.8 million logic elements.

Development Support
BittWare offers complete development support for the PCIe cards in the TeraBox X5000TT system. Use BittWare’s BittWorks II Toolkit – a collection of libraries and applications that provides complete hardware and FPGA interfaces – along with BittWare’s FPGA examples for traditional HDL FPGA development. Or use SDAccel or OpenCL for a high-level software-like FPGA development flow.

The TeraBox Advantage
Choosing a TeraBox FPGA server means knowing you are getting a pre-configured and tested solution. This includes setup and installation of your FPGA cards and associated hardware, your choice of operating system, and development tools. Your TeraBox arrives ready for use — giving your team more time for development and deployment.

Example System Configuration
The TeraBox X5000TT supports many of BittWare’s Achronix, Intel, or Xilinx FPGA-based PCIe cards. The table below lists system totals when populated with eight cards:

<table>
<thead>
<tr>
<th></th>
<th>FPGA</th>
<th>Cards in Server</th>
<th>Memory</th>
<th>I/O</th>
<th>Processing</th>
</tr>
</thead>
<tbody>
<tr>
<td>S7t-VG6</td>
<td>Speedster 7t</td>
<td>8</td>
<td>• 64 banks GDDR6 (up to 64 GBytes)</td>
<td>• 3.6 Terabit/sec</td>
<td>• 5.5 million 6-input lookup tables (LUTs)</td>
</tr>
<tr>
<td>520N-MX</td>
<td>Stratix 10 MX</td>
<td>8</td>
<td>• 16 banks DDR4 (up to 2 Terabytes)</td>
<td>• 2.3 Terabits/sec</td>
<td>• 1.5 Gbits embedded RAM</td>
</tr>
<tr>
<td>XUP-VV8</td>
<td>UltraScale+ VU13P</td>
<td>8</td>
<td>• 32 banks DDR4 (up to 4 Terabytes)</td>
<td>• 64 x 100/50/40/25/10 GbE</td>
<td>• 16.8 million system logic elements</td>
</tr>
</tbody>
</table>

* Contact BittWare for additional FPGA card options.

Server Specifications
Trenton Systems TTX5100
- PCIe Gen2 expansion system (Gen3 available soon)
- 5U rackmount chassis: 19.0”/483mm (W) x 8.75”/222mm (H) x 18.0”/457mm (D)
- Single USB interface to all cards in chassis, via a front panel USB port on the chassis
- PEU8039 PCIe host card for PCIe over cable I/O
- PED8044 PCIe target card for PCIe over cable I/O
- 1U micro-redundant 1200W ATX power supply
- Supports up to 8 double-wide Gen2 x16 cards
- 128 Gb/s host bus-to-expansion systems bandwidth (shared across all cards)
- One- or three-meter expansion cable
